SUMMARY

Full-Stack & Mobile Developer specializing in React Native, Next.js, and Python — building production-grade apps backed by serverless AWS infrastructure. Experienced in integrating complex third-party systems (GetStream, Cashfree, Razorpay) and implementing fintech logic including escrow flows, automated payouts, and double-entry ledgers.

TECHNICAL SKILLS

- **Languages:** JavaScript TypeScript, Python, C++
- **Frontend:** React.js, Next.js, React Native, Expo, HTML5, CSS3, Tailwind CSS, NativeWind, Shopify
- **Backend:** Node.js, Python, REST API Design, JWT
- **Cloud & Infrastructure:** AWS Lambda
- **Databases & Caching:** MongoDB, MySQL, Supabase (PostgreSQL), Drizzle ORM, Valkey / Redis
- **Real-time & Integrations:** GetStream Video SDK, Cashfree Payments, Razorpay, Shiprocket (Logistics), Mtalkz (SMS)

EXPERIENCE

- **Indiefluence** May 2025 – Present
Full-Stack Developer Kurukshetra, Haryana
 - Developed and maintained full-stack web and mobile applications using React.js, React Native (Expo), Next.js, Node.js, and Python-based serverless microservices on AWS.
 - Designed and implemented RESTful APIs with JWT authentication, webhook event handling, and efficient backend logic to support core application features.
 - Integrated databases using Supabase, MongoDB (with atomic transactions), and Valkey caching, ensuring secure data handling and optimized query performance.
 - Built and deployed serverless microservices on AWS Lambda with API Gateway, EventBridge scheduling, and CloudWatch monitoring for production reliability.
 - Collaborated with cross-functional teams to improve application performance, reliability, and overall user experience across web and mobile platforms.
- **HopingMinds** Jul 2024 – Sep 2024
Full-Stack Intern Mohali, Punjab
 - Worked on frontend development using HTML, CSS, JavaScript, and React.js, following modern UI and responsive design practices.
 - Assisted in backend development tasks including API integration and database operations using MySQL and MongoDB.
 - Used Git and GitHub for version control and team collaboration in real-world project workflows.

PROJECTS

- **Pawgloo — Veterinary Telehealth & Pet Social Platform** Nov 2025 – Present
React Native, Expo, NativeWind, Python, Node.js, AWS Lambda, MongoDB, Valkey, GetStream, Cashfree
 - Architected and owned the full frontend and backend of a dual-app ecosystem — Pawgloo (pet owners: matchmaking, vet discovery, consultations) and Pawgloo Partners (vet onboarding, scheduling, earnings) — built the complete React Native UI with NativeWind and integrated GetStream Video SDK for real-time WebRTC consultations and GetStream Chat for persistent in-app messaging.
 - Engineered AWS Lambda functions behind API Gateway with a custom Lambda Authorizer validating JWTs on every request; built an EventBridge-driven matchmaking feed that processes swipe interaction records and surfaces compatible profiles using filter and scoring logic in a Tinder-style interface.
 - Built a fraud-proof payment system to ensure vets are paid accurately and on time — designed a double-entry ledger with atomic MongoDB transactions automating GST calculations, a 3-tier Cashfree flow (Pay-in → Escrow → Payout), and idempotency guards on all webhooks to eliminate duplicate charges and revenue leakage.
 - Designed a per-minute call billing system for vet consultations from scratch and hardened it through multiple edge-case rounds (call drops, timing disputes, platform fee conflicts); implemented distributed Valkey locks for collision-free slot reservations and an EventBridge payout scheduler with race-condition-safe batch tagging to prevent double payouts.
- **Lukewarm — AI Business Card CRM** 2025 – Present
React Native, Expo, Next.js, TypeScript, PostgreSQL, OpenAI, Redis, Stripe, Google APIs

- Led frontend development and cross-platform sync for a full-stack CRM — built the React Native mobile app and Next.js web dashboard with real-time data synchronization across both platforms; OpenAI Vision extracts structured contact data (name, email, phone, socials, certifications) from scanned business cards with multi-language and front/back support.
- Integrated Google OAuth, Contacts import, and Calendar sync; built a Whisper-based voice pipeline that transcribes voice notes and classifies intent (task vs. reminder vs. note) to auto-generate follow-up items — helping users act on connections before they go cold.
- Implemented a credit-based monetization model (Starter, Standard, Premium) with Stripe gating scan limits per plan tier, delivered across React Native (mobile) and Next.js (web dashboard); led early-stage R&D toward on-device card scanning to eliminate OpenAI dependency for offline use.

• Rabbit Auto Care

Jul 2024

Next.js, Supabase, Vercel, Shiprocket

- Developed a full-stack e-commerce platform for a premium car care brand using Next.js and Supabase, delivering a fast and responsive user experience.
- Implemented product listings, authentication, and order workflows with secure backend integration.
- Integrated Shiprocket for logistics management and deployed the application on Vercel for production use.

• Genesis Classes

Sep 2024

Next.js, Supabase, Tailwind CSS, Razorpay, Mtalkz

- Built a scalable educational platform using Next.js, Supabase, and Tailwind CSS for competitive exam preparation institutes.
- Integrated Razorpay payment gateway for online fee payments and Mtalkz for SMS communication services.
- Designed secure backend workflows for student data management and real-time application usage.

• House of Aerawat

Aug 2024

React.js, Node.js, Supabase, Tailwind CSS, Razorpay

- Developed a full-stack e-commerce application for handcrafted products using React.js, Node.js, and Supabase.
- Implemented product management, user authentication, and secure checkout with Razorpay integration.
- Optimized UI performance and responsiveness using Tailwind CSS for improved user engagement.

EDUCATION

• Seth Jai Parkash Mukand Lal Institute of Engineering and Technology

2021 – 2025

B.Tech in Information Technology (IT)
